a Coverage of the four adopted evidence channels (GO, HPA, Pfam, HPO) and of the two pathway sources tested and not adopted (GO-CAM, Reactome)

b 69% and 29% disease coverage: pathway channels (Reactome, GO-CAM) tested, not adopted

Reactome pathway membership

added as a fifth channel,
shared-gene disease pairs only
channel defined for 89.0% of pairs,
69.1% of diseases

ΔAUROC −0.003
(95% CI −0.010 to +0.004; 5 seeds,
IxIDN-Matched)

changes the edges of 556
of 13,021 diseases (4.3%)

GO-CAM causal activity graph

covers 28.2% of benchmark genes,
42.0% of benchmark pairs
and 28.8% of 13,021 diseases

dropped on coverage,
before training a model

c Mechanism-inventory choice barely moves the embedding's neighbourhood structure
