Approved repurposing (launched drug-sharing pairs)
Shared launched drug
IxIDN+ pairs whose shared drug is launched for both diseases
Positive controls
2,000 pairs over 401 diseases
no negative pairs
Strata
hard (1,104): no shared gene, HPO or GO link
easy (896): the rest
Split (hard pairs)
dev 540 / holdout 560, drug- and mechanism-disjoint; 4 named complement pairs apart
Recovery metric
per-pair percentile vs 20,000 random disease pairs; recovered at ≥ 75th
Task 1 Disease–disease association
used for Task 1 only;
Task 2 uses IxIDN-Matched only
benchmark pairs never enter the graph (checked automatically)
