
a
Diseases coloured by cluster (K = 55) – control pairs
positive control, same cluster
positive control, neighbouring cluster
negative control
NMOSD (eculizumab-approved)
NF1 (mut) – NF2
clusters 29 and 33
TSC – LAM
same cluster (33)
diabetes insipidus – T2D
clusters 51 and 12
Crohn disease –
ulcerative colitis;
psoriasis –
psoriatic arthritis;
both same cluster (12)
eculizumab-approved diseases (cluster)
aHUS (23)
PNH (23)
NMOSD (43)
gMG (23)
Isomap 1
Isomap 2
b
Common (2,532) and rare (10,489) diseases – rare examples
congenital fibrosis of the
extraocular muscles
ptosis
cluster 6
CPVT1
sudden arrhythmic death syndrome
cluster 19
CESD (LAL-D)
familial hypercholesterolaemia
cluster 26
Crigler–Najjar type 2
Gilbert syndrome
cluster 16
Huntington disease
Parkinson disease
cluster 27
Common
Rare
